

FM 1959/Dixie Farm Rd Overpass

START: July 20, 2012 • 9PM

DURATION: Late October 2012

WHERE: FM 1959 overpass at IH 45

Overpass Reconstruction

The existing overpass will be demolished and a new ground level intersection will be constructed and should be reopened to traffic by late October 2012. The IH 45 mainlane bridge will now go over the FM 1959/Dixie Farm Rd intersection replacing the current overpass structure. The contractor has been allocated 108 working days to complete and open the new intersection and has a \$16,000 per/day incentive to get the work done early.

During the reconstruction vehicles traveling east on Dixie Farm Road to IH 45 will be detoured onto the southbound frontage road to FM 2351 where they will be able to cross under IH 45 to the northbound frontage road which will allow access back

to FM 1959. Vehicles traveling west on FM 1959 to IH 45 will be detoured onto the northbound frontage road to Scarsdale Ave/FM 2553 where they will be able to cross over IH 45 to the southbound frontage road which will allow them access back to Dixie Farm Road.

The traffic signals at Scarsdale/FM 2553, FM 1959, Dixie Farm Rd. and FM 2351 will be adjusted and timed to meet conditions.
